

NoCO2 Reassessment Report

Executive Summary

The Carbon Reduction Institute welcomed SAFcomm Pty Ltd into the NoCO2 certification program in June 2007. In doing so, CRI undertook an audit of the greenhouse gas (GHG) emissions produced from the operations of SAFcomm for the purpose of reducing and offsetting these emissions.

The initial audit considered all GHG emissions sources within the boundaries outlined in the NoCO2 program over a one year period. As part of the recertification process, CRI audits and reports on the continuing emissions of SAFcomm, enabling SAFcomm to continue to maintain a carbon footprint of zero.

The audit found that SafComm produced the equivalent of 113.18 tonnes of carbon dioxide emissions. This year's audit results along with reporting from periods are presented in this report and are summarised by source in the chart below:
